## P2PIPC

### User Manual for Mobile Phone

#### APP Download

---

Please Download and install the APP before you set up the IP Camera. Search on Google Play store and APP Store for “P2PIPC ”

**One Key Setting Functionality (cell phone must be connected to the WiFi. This one key setting functionality is only available for the models HW Series IP camera)**

- a). Connect the camera with power adaptor (you do not need to connect the Ethernet cable).
- b). Launch the APP, tap on “+” to access the “Add Camera” function, then click on “One Key Setting”, and the screen shown below will appear: **(Please choose WXH-Start configuration)**

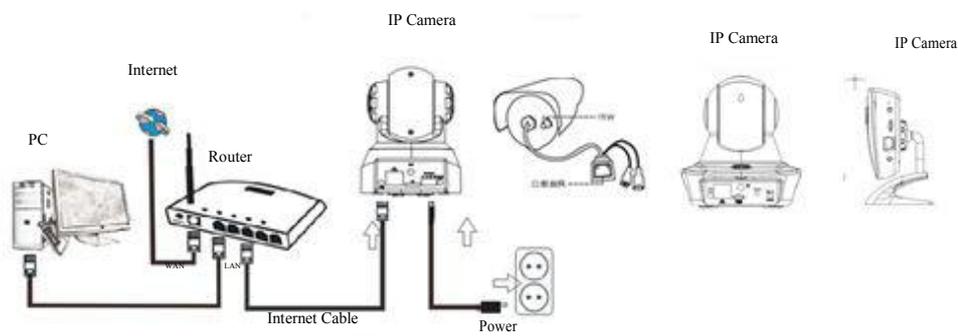

Enter the correct WiFi password, then click on “Start configuration”, like shown in the screen below:

- c). Wait for 60 seconds, then choose the respective device and enter the password. If done, click on save to connect to the WiFi.

## How to connect the IP Camera

---

Connect the power supply cable to the IP Camera and wait for about 2 seconds until the green indicator will light permanently. After another 10 second the yellow indicator will start flashing and the camera will perform the IP detection automatically.

You may continue with the next step, if after another 30 seconds the camera successfully was launched.

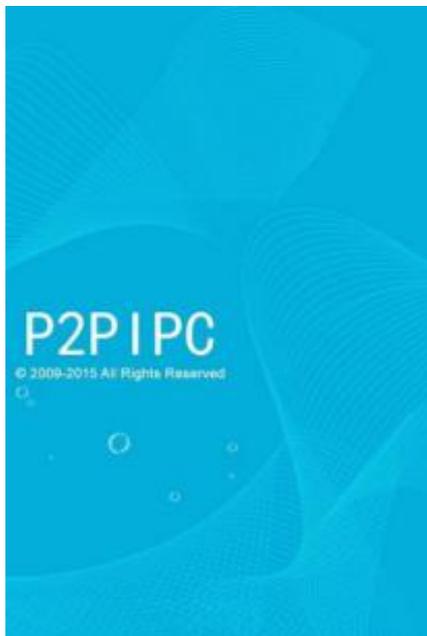

## Use of the APP Functions

---

App Icon:

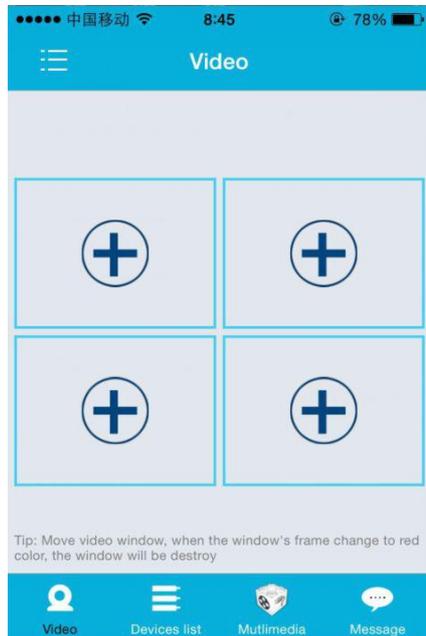

Home screen:

## Part 1. Home screen

Here you are provided with the options: “Video”, “Device List”, “Multimedia”, and “Message”.

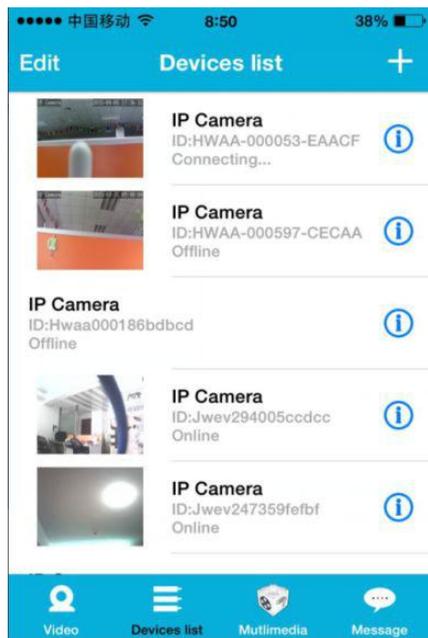

### 1. Video:

You may add up to four cameras to this multi-device page. Here the three functions below are provided:

- a) You may stop the video by sliding over the video thumbnail. To view the footage in full screen mode, double click on the respective thumbnail.
- b) To access the Menu, click on the icon in the upper left corner of the screen.

## 2. Device List:

In the device list the connected cameras are shown. Here the four functions mentioned below are possible:

- Click in the upper left corner of the screen on the “Edit” button to access the device settings if you want to change or delete the parameters of one or all devices.
- To add a new camera, click on “+” icon in the upper right corner of the screen.
- To set or modify the settings of a device, click on the  icon on the right side next to the respective camera.
- Click on the camera thumbnail to activate the full screen display.

### 3. Multimedia:

Multimedia includes the photo and video management. The three functions below are possible:

- a) Click on the  button to access the list of all photos and videos.
- b) Click on the  button to view a video remotely.
- c) Click on  to view the video of the recent day.

#### 4. Message:

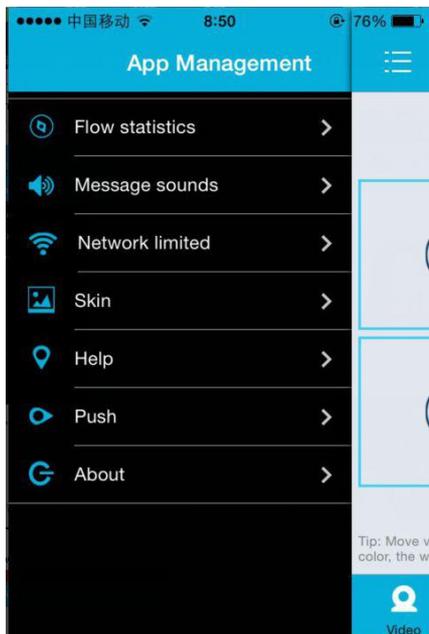

Message includes all alarm events recorded by the connected camera(s).

a) To view the alarm events click on the desired camera menu item.

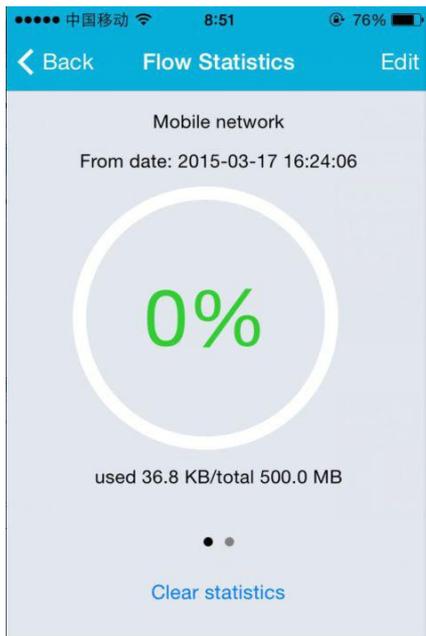

#### Part 2. App Management

The App management enables you to perform individual and also contains the Help function for the APP. The screen displays 7 options: "Flow statistics", "Message sound", "Network limited", "Skin", "Help", "Push", "About".

App management:

1. Flow statistics:

Here the network traffic used will be displayed. The traffic metrics for the mobile network and the WiFi will be shown.

Here the three functions below are possible:

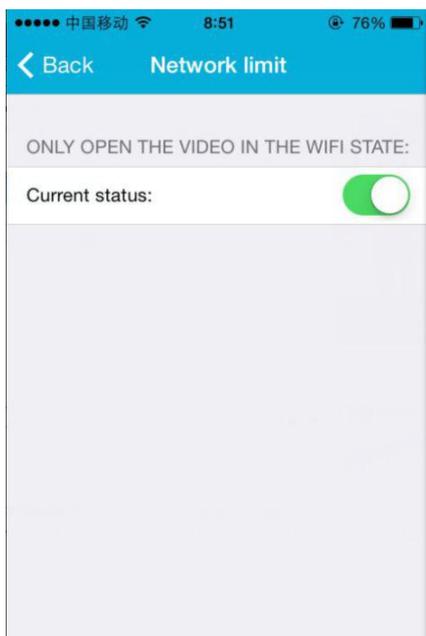

- a) By moving the grey slider offer the screen the traffic statistics for the mobile network and WiFi will be displayed.
- b) By clicking the “ **Edit** ” button in the upper right corner of the screen you are able to configure limits for the mobile network and WiFi network. This setting will not affect the use of the app, it just provides an intuitive reminder of the traffic used on the mobile and WiFi networks.
- c) By clicking the “ **Clear statistics** ” button on the bottom you may clear the traffic statistics for the mobile and WiFi networks.

2. Message sounds:

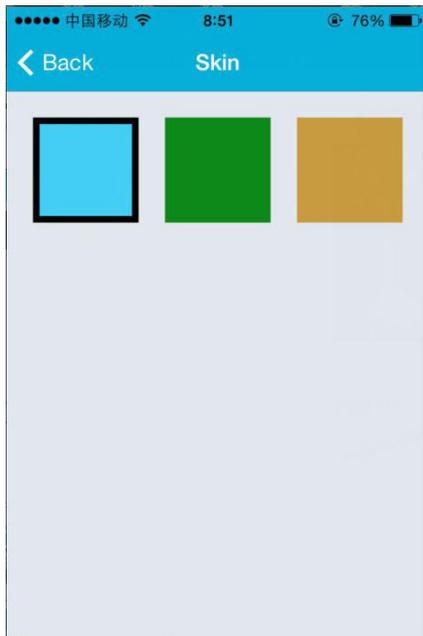

Here you may activate/deactivate the Message alarm sounds.

3. Network Limited:

Here you may set that the video only may be opened if the cell phone is connected to a WiFi network.

4. Skin:

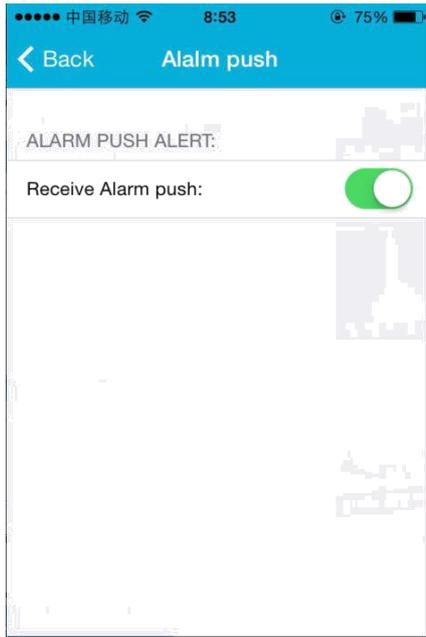

Here you may change the appearance of the App. Currently the colors blue, green, or gold are available.

5. Help:

“Help” is used for offering help, this option is a web page, the help contents will change according to the web page.

6. Push:

Under “Alarm push” you may configure if you want to receive alarm notifications, or not. After deactivation the App will not receive any alarm messages anymore.

## 7. About:

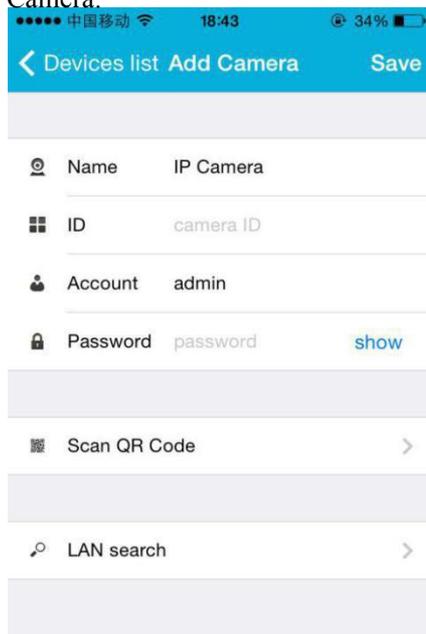

In the “About us” screen the essential information on the App is displayed, like name, version etc.

### Part 3. Add Camera

By using this screen you may add new cameras to the App. Here are the three functions “Adding camera manually”, “Scan QR code”, and “LAN search” possible.

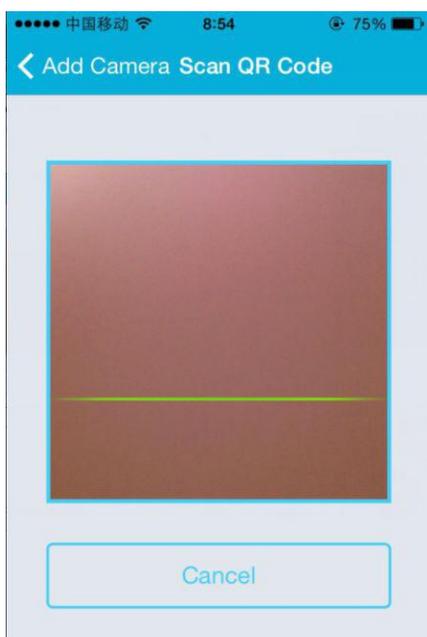

#### Add Camera:

#### 1. Add camera manually

Enter the device information (ID, account, password), and click on the "Save" button in the upper right corner of the screen.

2. Add a camera by scanning QR code, Scan QR Code

For the scanning, please enter the put the QR code into the scan box. Then the device ID number will be scanned. After the scan is completed you only must enter the account and the password of the device, and the camera will be added to the device list.

3. LAN Search:

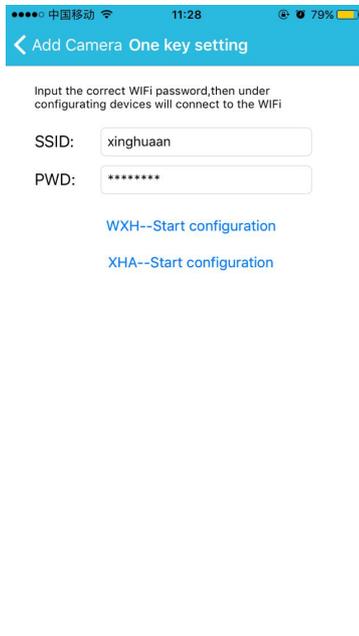

LAN requires two preconditions:

- a) The mobile device must be connected to the local network.
- b) The camera must be located in the same network.

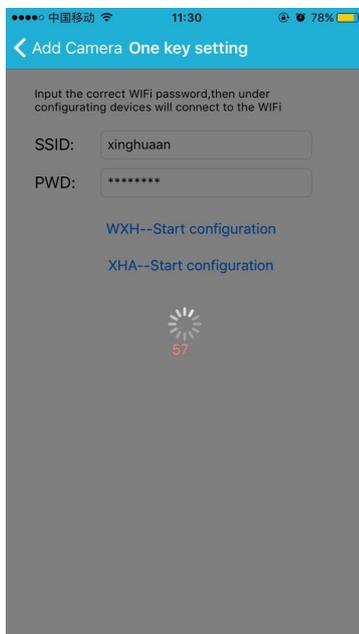

After the app was completing the camera search, click on the new menu item displayed. This will redirect you to the Add camera screen where you modify the configuration, and save the device.

4. One key setting function (mobile phone is connected to a WiFi. **This function only is available for HW Series IP Camera**).
