# 1 Preface

Thank you for choosing our products, we will provide you the best service, if you have any questions or need, please contact the technical support department at any time.

This manual applies to iPhone Seetong mobile phone surveillance client, contents only for reference, mainly to help user how to install and use mobile phone surveillance software.

Product, updated from time to time, so a part of software screenshot may be have differences with manual without prior notice, we will update it in newer version of manual.

This user manual may have technical inaccurate or literal error, we sincerely hope you can feed back your suggest to enrich and improve our manual, thank you for your strongly support.

## 2 Function Brief

Seetong Mobile-phone Surveillance Software we called Seetong for short, is designed for mobile-phone user. It is convenience for users to monitor their device in anywhere, and do some operations as listening, talking back, capturing, videoing ETC. This manual detailed describes the use method of Seetong. After the mobile phone connected with the Internet, open this software, you can surveillance your device in real-time, no matter where is the device.

Now we make a short introduction of functions included in Seetong.

### ➤ **User Registration**

Support register cloud management server legitimate user, for user add device and manage device more convenient.

### ➤ **Login**

Support login or logout surveillance device through “device login”, get device list through “user login”;

Edit parameters in “user login” (such as cloud server legitimate username, cloud server legitimate password); edit parameters in “device login” (such as cloud server legitimate device ID, device username and password)

“User login” default saves username. “Device login” default saves device cloud ID, user name and password. Software default saves the latest login information.

### ➤ **Device manage**

---

Support device to add, camera name, user password, media parameter modification; image flip, motion detection and alarm settings.

➤ **Live view**

User can choose multiple devices' multiple channels to preview real time surveillance video and choose 1/4, 1/9, 1/16 split screen to view at the same time.

➤ **Recording and capturing**

User can real time record video or capture video; file will automatically be saved in mobile phone memory card.

➤ **Listening and talking back**

While front-end device with the function of audio and connect audio input and output device, user can listening and talking back in the interface of live view.

➤ **PTZ**

User can adjust surveillance position through PTZ remote control while previewing real time surveillance video. Operation contains PTZ moving (up, down, left, right, rotate, stop rotate, left up, left down, right up and right down ), adjust iris, zoom in, zoom out, focus near and focus far.

➤ **Landscape Mode and Vertical Screen Mode**

User can choose landscape mode or vertical screen mode as needed.

➤ **QR Code Scan**

Scan QR code in device's Internet webpage to fill in information in device login edit box, if the information is right, this device will be added auto.

➤ **Alarm control**

Support alarm information switch and alarm settings, the user can configure.

➤ **Snapping pictures and Video file sharing**

Support local file photo albums and local video sharing.

## **3 Install and Uninstall Software**

### **3.1 Operating Environment**

Seetong\*.\*.ipa supports running on iPhone mobile phone and iPad 5.0 and upper version.

### **3.2 Install**

---

Download Seetong\*.\*.ipa through electronic market or mobile phone assistant and install it. Install successfully the shortcut icon as follow:

## 3.3 Uninstall

Select  then long press it will display , click  and confirm “delete” will uninstall successfully.

# 4 Login

## 4.1 Device login

Click the shortcuts in the screen, open Seetong and enter the interface of login.

The default login method is “Device login”. It is means that enter device cloud ID username and password, if right then you can login successfully. Here a button named “More”, as usually, the access username and password of device is “admin” and “123456”, to simplify the operating, this two has been written, only when your device username or password different with then you need click this button and modify then. The device login interface as following:

**Related properties are described below:**

**Device ID:** Cloud server legitimate device ID;

**Username:** Username of device (default is admin);

---

**Password:** Password of device (default is 123456).

**Notice:** when login as device, the login is for one device, though after login you can add other devices, every device is independent, so after logout, the device list will not be saved.

## 4.2 QR code scan

To simplify operation, Seetong with the function of QR code scanning. This is used to add device auto. The adding step as follow:

First access cloud server by browser, select “device login”, entering the device cloud ID and enter its web page. In the upper left corner, there is a QR code as follow figure. Then open Seetong, click the button of “Scan”, enter the interface of “Scan QR code”. Put the mobile phone screen aligned to the QR code in the computer screen and scan it, after that, the Seetong will add this device auto.

## 4.3 User registration

Since when you login as device, the device list can't be saved, there is another login method named user login. If you login as user, your device list will be written in database, when you login in this user again, it will get the before list.

First we introduce the user registration. In the interface of “User login”, click the link of “User Registration”, then come out the interface as follow:

A screenshot of a mobile application's registration form. The form has a green header with a 'Back' button and the title 'Register'. It contains several input fields: 'Username' (required, 4 to 32 characters), 'Password' (required, 6 to 32 characters), 'Confirm Password' (required, 6 to 32 characters), 'Email' (optional), and 'Phone' (optional). At the bottom, there is a 'Captcha' field (required) with a visual captcha image showing the numbers '54858'. A green 'Register' button is located at the bottom right of the form.

**Related properties are described below:**

---

**Username:** required, 4 to 32 characters. Only can be digit, letter or underline.

**Password:** required, 6 to 32 characters.

**Confirm Password:** required, 6 to 32 characters, must the same with password.

**Email:** optional, use for receive alarm information.

**Phone:** optional, use for receive alarm information.

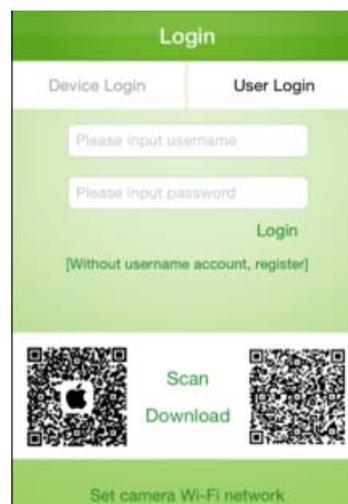

**Captcha:** required, same with right number.

User register successfully will input username and password information in “User Login” edit box.

## 4.4 User login

After successfully registering will auto skip to the interface of “User Login”. Enter right username and password you can login successfully. the first login user without device so its device list is null, if the user with devices, after login in will show the device list.

The interface of “User Login” is as follow:

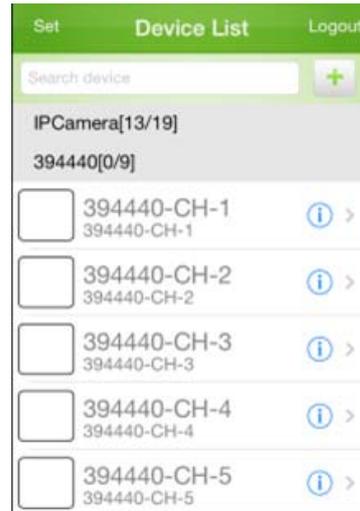

**Related properties are described below:**

**Username:** Cloud server legitimate user (default is null, case insensitive).

**Password:** Cloud server legitimate password of user (default is 123456).

Following figures are new user first time login in, its device list is null (left) and the device list of the user has many devices (right).

## 4.5 Set camera Wi-Fi

The function of “Set camera wifi” is designed for special device. For example of TH66R device, put device to reset to factory setting in hardware method, then it can be used as AP. But now this device can’t access the internet, the function of “Set camera wifi” is to modify its WIFI configuration and make sure it can login in cloud server.

The operating as follow:

First make sure the mobile phone has connected to WIFI and can access internet. Open Seetong, in the interface of “User Login” click the link of “Set camera wifi”, then enter the interface of “Set camera wifi”, because the ISO operating system has some limit, the Seetong can’t modify the mobile phone’s wifi setting, so in this interface detail describe the following step.

According the introduction, enter the settings of your mobile phone, click “Wi-Fi”, it will search AP automatically, find the device’s AP, such as 161504, click it, the mobile phone

---

will connect it. After connect successfully, open Seetong again, then come out the interface as follow figure. It shows that the software will modify the device's wifi settings and make it connect to the mobile phone's wifi, please press the password. If the password is right, it will connect successfully.

Now you can access this device by adding its cloud ID which is the same as its ESSID name.

## 5 Live view

### 5.1 Live view

Click "Live View" in software main interface to enter video preview interface, as shown below:

The method of selecting device to play is click the window, this time the window will be

---

select, click again will skip to the interface of “Device list”, in here select the device, click, then this device will be added to the window to play video, as follow figure. When playing, the button of  will change to the button of . From adding device to view its video may need some time, please wait. In this video preview screen also can switch the video bit stream and the main stream for viewing. Click “Settings” button in the top left hand corner can enter seetong main screen.

In 4 screens, 9 screens, 16 screens mode, repeat this operation can open multiple real time video. 9 screens and 16 screens default plays key frame.

## 5.2 Listening and talking back
