Message choice of coding

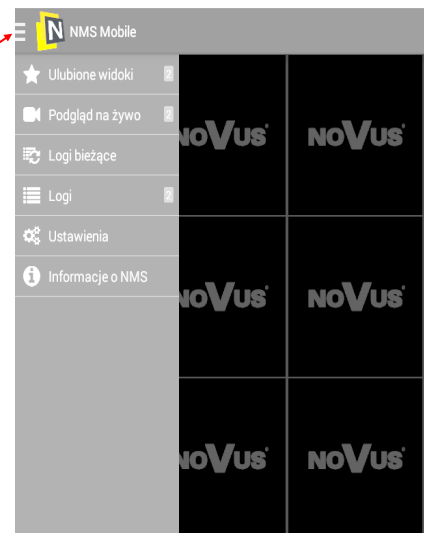

INSTALLATION AND MAINTENANCE PROGRAM SYSTEM FOR ANDROID

4.1 Adding new locations (DVRs) to the list of devices.

When you first start the program setup screen appears and then a list of servers ready for viewing. You must enter data such as: NMS server address, port (default is 555), username and password (in the standard settings the user is "root" and the password "pass"). To call back window, select the server add the Menu button and in the "Settings" you can redefine an additional server.

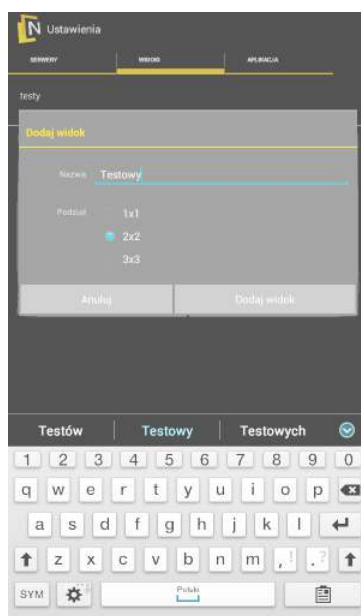

After pressing the "Menu" button, select "Settings" tab where we can add another server.

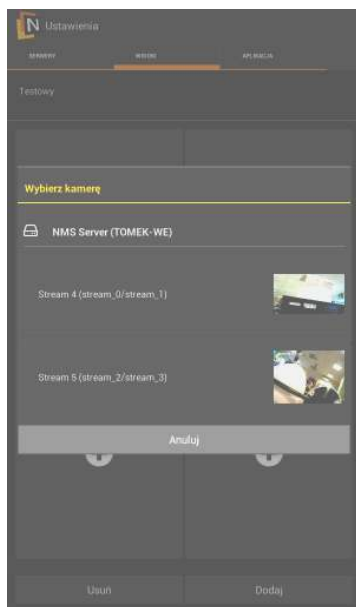

4.2 Defining the view of cameras.

After starting the server that you add earlier, we can go to the "VIEWS" menu, in which you can set your preferred order and display order of streams that are shared by remote NMS server.

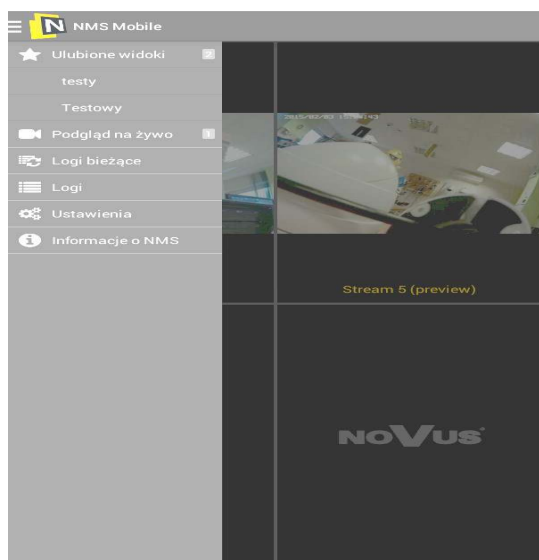

INSTALLATION AND MAINTENANCE PROGRAM SYSTEM FOR ANDROID

After entering the name of view and determine the size distribution of the cameras on the screen and confirm it by clicking "Add View" button. When you add all views you can also, add a camera in the distribution field, pressing on the symbol "plus".

eng

After leaving the setting appears in the application interface. The first menu is "Favorite views", a place where we find our previously prepared view "Test" divide 2x2 with added two cameras. After selecting a Favorite View "Test" will be published immediately to us as a view of the two cameras.

SOFTWARE

4.3. Icons and Navigation

The application performs live preview, icon SD / HD allows you to change the display resolution stream. The program also has the ability to play video content stored on the server NMS. This feature will start by selecting a single camera and switch it to playback mode using  the triangle.

Icon inclusive settings.

Icon changes in display quality SD / HD

Icon inputs to playback mode does not appear if the server does not record this stream

mode icon Full Screen

Information talking about using digital image magnification x10, control the "zoom" is done through gestures made with fingers.

"Zoom" we make a gesture with your fingers, through the zoom in / out fingers on the screen.

Icon entry into the "live" mode

When you switch to playback mode icon will appear on the calendar in which you can select a recording date that you want to play.

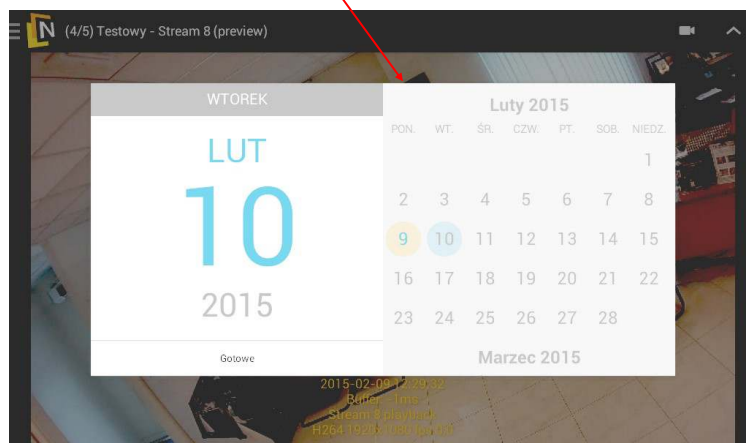

Stream full-screen mode can disable the back button positioned on a smartphone.

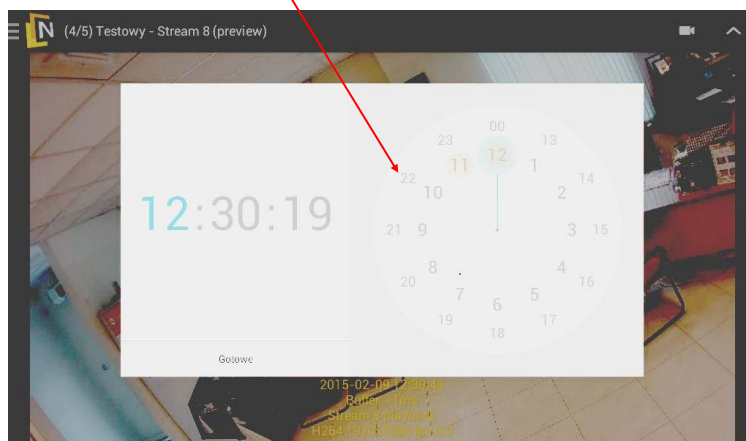

4.4. Search recordings with the calendar.

After switching the camera in playback mode, select the calendar  icon and look for interesting records.

In the first stage we select day recordings, when recordings are marked with an orange circle. After selecting the confirm button "Done"

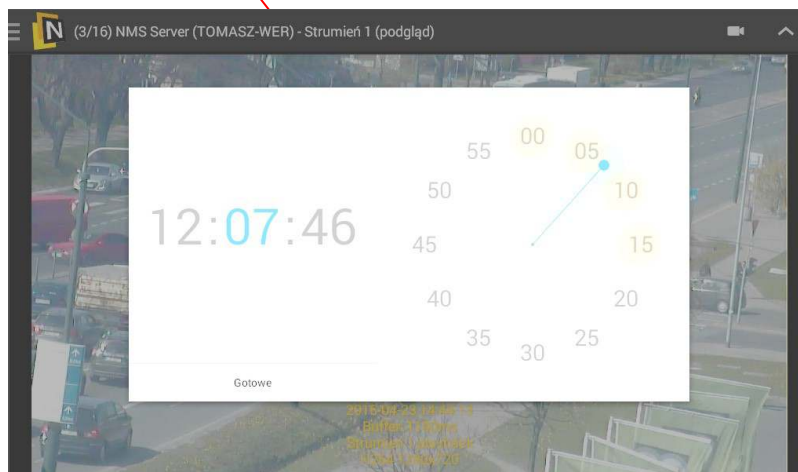

Then choose from a 24- hour clock, also here we have mark where the hours are recorded. After selecting the confirm button "Done"

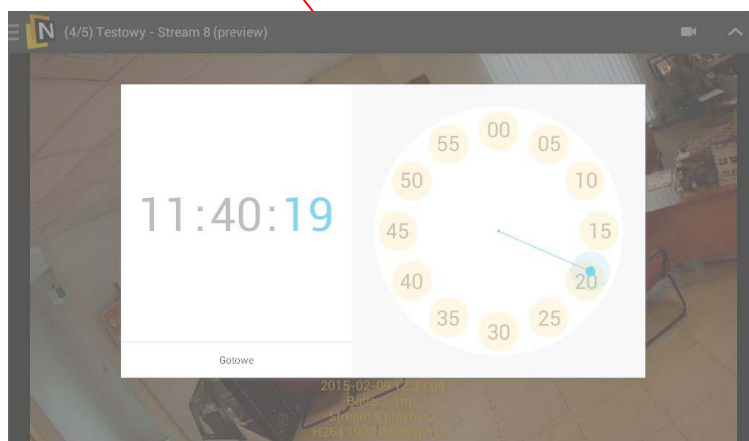

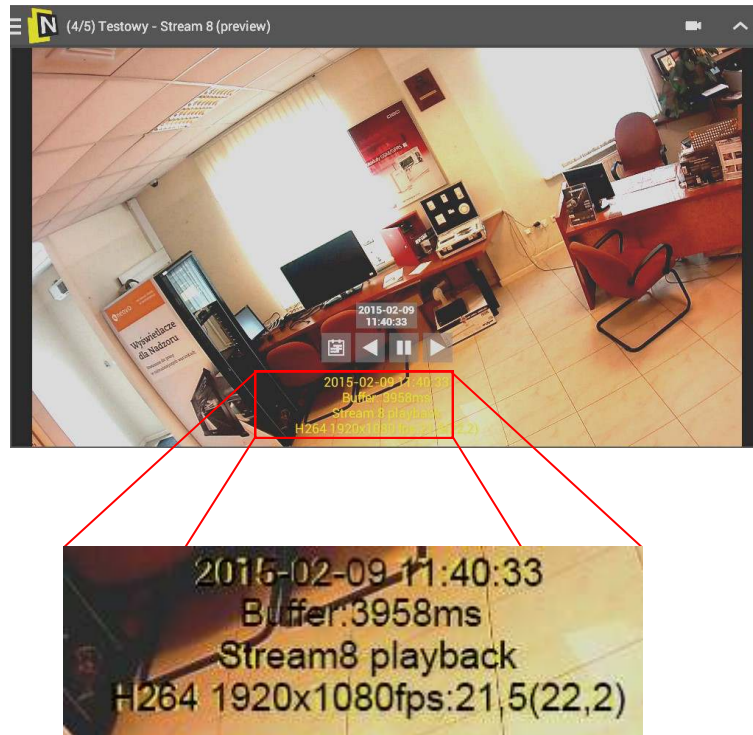

SOFTWARE

In the next step we choose minutes. They are marked also with an orange circle. After selecting the confirm button "Done"

Then select a seconds and also press "Done".

eng

At this magnification, we see the playback parameters of material:

1. Date time
2. The size of the buffer specified In milliseconds (ms)
3. Name of the stream
4. Codec name, resolution, display speed given in frames per second.

SOFTWARE

4.5. Basic functions of PTZ

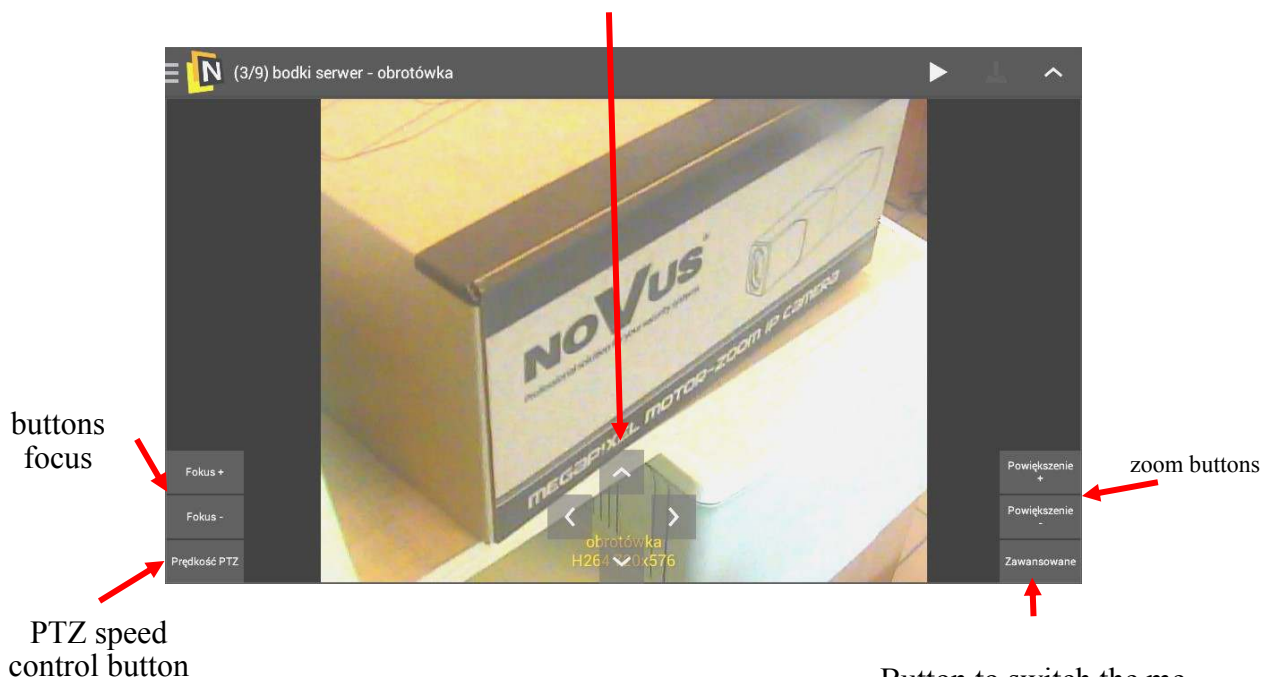

Using the NMS server application can also control PTZ cameras. In the basic mode available. functionality includes rotating the camera to the right, left, up, down, and adjust the lens focal length and sharpness. Additionally, you can adjust the speed of camera movement during their rotation. In advanced mode it can be programmed, and programmable call shots (presets), as well as execute functions of patterns, tours and scan launch.

To start controlling PTZ camera, select icon "Joystic" in the right corner of the menu. If the camera does not have PTZ control, "Joystic" does not appear.

eng

When you switch to PTZ mode arrows will appear needed to rotate the camera.

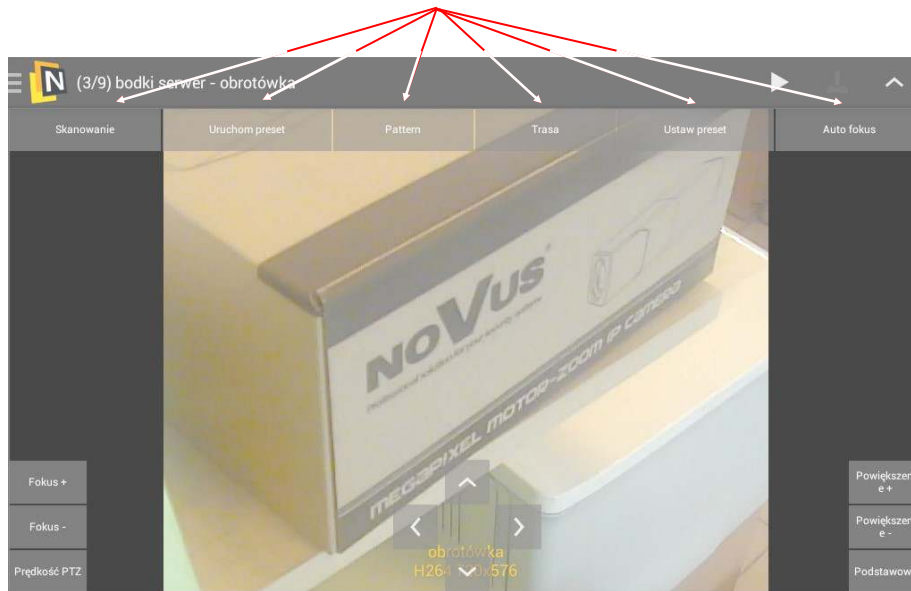

Button to switch the menu advanced PTZ camera

4.6.Advanced features of the PTZ

When you switch PTZ camera in advanced mode, we will see the tabs with additional features.

Advanced features appear in the upper part of the program, there are functions like scanning, run the preset, pattern, route, set preset or auto focus. In most of these functions, they induce previously configured task in the camera, such as presets, scan, or route.
