Mini IP Camera Quick User Guide

Products Introduction

-1-

Step1. iztouch App Installation

Before beginning the setup process, your phone must be connected to a wireless network (avoid using 5G network as this model don't support it)

Method1: Scan the QR code to download the "iztouch" application

Method 2: Search "iztouch" on Google Play or iOS App Store

Step2. Register an App user account

Trouble shooting:

- If the IP camera can't be found in step 4-5, please make sure you have done step 3-2 to insert a pin to reset the IP camera and wait for 30 seconds.

- If you experience inconsistent signal, it could be due to 1) too many devices sharing the same internet network. Or 2) the IP camera is too far from the router if using WI-FI connection.

- If you fail to setup the WI-FI network in step 4-7, please make sure your phone is not connecting to a 5G WI-FI signal. You can resolve this issue by reconnecting to a non-5G WI-FI signal on your phone

- If you want to reconnect the IP camera to a different internet network after you successfully completed step 1 to 4, please remove the IP camera from your app and go through step 3 to 4.

- For any other quality and setup issue, it is recommended you insert a pin (until you hear a cashier sound) to reset the IP camera.
